Appendix D - Post-Developed Hydrographs

Appendix E - Soil Data

Appendix F - Pipe Calculations

Appendix G - Emergency Spillway Design

Appendix H – BMP Calculations

Appendix I - Drainage Area Maps & Soil Log Exhibit

## **1.0 Introduction**

This report outlines the results of a hydrologic and hydraulic stormwater runoff analysis conducted by Van Cleef Engineering Associates (Van Cleef) with regard to the proposed development on Lot 14.02 in Block 286 as designated by the Franklin Township Tax Maps. The tract consists of approximately 2.77 acres and is located in the R-10 District.

This report has been prepared to summarize stormwater analysis design objectives, methodologies and calculations pertaining to the conveyance of the stormwater runoff that is generated by the property under pre-developed and post-developed conditions.

## **2.0 Site Description**

### **2.1 Pre-Developed Conditions**

Under pre-developed conditions, Lot 14.02 is vacant and consists of woods in good hydrologic condition. The adjacent properties along the northern, southern and western property boundaries are dedicated to residential uses. The adjacent property along the eastern property boundary is dedicated to the Mount Carmel Church. The Existing Drainage Area Map (Appendix I) depicts two drainage areas. Area 1A is comprised of the area of disturbance associated with the proposed development and thus the peak flow rate corresponding to the runoff generated by this area must be sufficiently reduced in accordance with N.J.A.C. 7:8-5.6. Area 1B, on the other hand, is comprised of the remaining area that is drained by the proposed pond constructed wetland. The peak flow rate corresponding to the runoff generated by this area does not need to be reduced because this area will not be disturbed as a result of the proposed development. The runoff generated by both areas is conveyed toward Belmar Street via overland flow. The boundaries of the drainage areas and the location of the point of analysis are shown on the Existing Drainage Area Map in Appendix I.

### **2.2 Post-Developed Conditions**

Under post-developed conditions, Lot 14.02 is subdivided into six lots. The proposed development involves the construction of a pond constructed wetland, five single-family dwellings and a roadway along with appurtenant driveways. The Proposed Drainage Area Map (Appendix I) depicts two drainage areas. The runoff generated by Area 1A is conveyed to the pond constructed wetland via a network of storm sewers. The runoff generated by Area 1B will bypass the pond

constructed wetland via a swale that is adjacent to the northern tract boundary. The boundaries of the drainage areas and the locations of the point of analysis are shown on the Proposed Drainage Area Map in Appendix I. The outflow from the pond constructed wetland is discharged to the existing storm sewer network. The applicable runoff quantity requirements will be addressed by the pond constructed wetland whereas the applicable runoff quality requirements will be addressed by the proposed MTDs.

### **3.0 Methodology**

The assessment of stormwater runoff has been based upon the Natural Resources Conservation Service Methodology as described in Technical Release 55 (TR-55), "Urban Hydrology for Small Watershed." The theoretical storms that are referenced in this report are modeled via the 24-hour SCS Unit Dimensionless Hydrograph and the rainfall distributions are based on the data provided for Region C by the NOAA. The recurrence intervals of 2, 10 and 100 years were analyzed via Bentley Pond Pack version 8i. The program is tailored to model the SCS Method for hydrograph generations and to perform interactive solutions of continuity equation (outflow = inflow +/- storage) with the intermediate values of the routing curve obtained through linear interpretation.

According to the New Jersey Supplement to Chapter 2 of the Engineering Field Handbook published by the NRCS, the rainfall amounts generated by the 24-hour design storm within Somerset County are as follows:

2-Year	=	3.34 inches
10-Year	=	5.01 inches
100-Year	=	8.21 inches

The Soil Conservation Service Soil Survey (SCS) for Somerset County was utilized in order to classify the soils within the tract.

The Rational Method was utilized to determine whether the capacity provided by the proposed pipes is sufficient for the runoff generated by the 25-year design storm.

<b>Soil Symbol</b>	<b>Soil Name</b>	<b>Hydrologic Soil Group</b>
KkoC	Klinesville Channery Loam (6-12% Slopes)	D

The location of these soils is indicated in Appendix A.

## **4.0 Stormwater Management Objectives**

The primary objective of this report is to demonstrate that the proposed stormwater management measures are designed in accordance with all of the applicable regulations pertaining to runoff quantity and quality. The proposed improvements are designed to meet the requirements of Franklin Township, the New Jersey Department of Environmental Protection and the Standards for Soil Erosion and Sediment Control in New Jersey.

## **5.0 Runoff Quantity**

The peak flow rates corresponding to the designated point of analysis will be sufficiently reduced via the proposed outlet structure within the pond constructed wetland. The results of the routing calculations are tabulated below. These results indicate compliance with N.J.A.C. 7:8-5.6. Refer to Appendix C and D for further information pertaining to the routing calculations.

To determine whether the emergency spillway pertaining to the pond constructed wetland is sufficient, routing calculations were performed under the assumption that the outlet structure is blocked. The results of these calculations are included in Appendix G.

Safety ledges are typically required within a pond constructed wetland. However, the proposed pond constructed wetland has been designed without safety ledges because it will be surrounded by a safety fence which merits an exemption from the safety standards for stormwater management basins per N.J.A.C. 7:8-6.3.

<b>Peak Flow Rate Reductions (Current Adjusted Precipitation)</b>				
<b>Storm Frequency</b>	<b>Pre-Developed Peak Flow – Area 1A (CFS)</b>	<b>Pre-Developed Peak Flow – Area 1B (CFS)</b>	<b>Allowable Peak Flow (CFS)</b>	<b>Post-Developed Peak Flow (CFS)</b>
2	2.77	0.46	$2.77 \times 0.50 + 0.42 = 1.81$	1.41
10	5.98	0.91	$5.98 \times 0.75 + 0.91 = 5.40$	4.75
100	13.21	1.90	$13.21 \times 0.80 + 1.90 = 12.47$	10.78

<b>Peak Flow Rate Reductions (Future Precipitation)</b>				
<b>Storm Frequency</b>	<b>Pre-Developed Peak Flow – Area 1A (CFS)</b>	<b>Pre-Developed Peak Flow – Area 1B (CFS)</b>	<b>Allowable Peak Flow (CFS)</b>	<b>Post-Developed Peak Flow (CFS)</b>
2	3.85	0.61	$3.85 \times 0.50 + 0.61 = 2.54$	2.51
10	7.95	1.18	$7.95 \times 0.75 + 1.18 = 7.14$	6.88
100	19.41	2.72	$19.41 \times 0.80 + 2.72 = 18.25$	13.94

## 6.0 Water Surface Elevation Summary

A summary of the water surface elevations and outflows corresponding to the 2-, 10- and 100-year design storms are shown below:

<b>Pond Constructed Wetland (Future Precipitation)</b>		
<b>Storm Frequency</b>	<b>Water Surface Elevation (FT)</b>	<b>Outflow (CFS)</b>
<b>WQDS</b>	95.62	0.45
<b>2</b>	96.71	2.35
<b>10</b>	97.47	6.43
<b>100</b>	99.56	12.85

## **7.0 Runoff Quality**

To fulfill the runoff quality requirements that are applicable to this development, the runoff generated by the proposed motor vehicle surface area during the Water Quality Design Storm will be treated via manufactured treatment devices which are designed to achieve a TSS removal rate of 80% and thus comply with N.J.A.C. 7:8-5.5. Further information pertaining to these BMPs is included in Appendix H.

## **8.0 Groundwater Recharge**

The entirety of the property consists of HSG 'D' soil. Thus, the annual groundwater recharge volume under both pre-developed and post-developed conditions is zero cubic feet and the proposed development will not result in an annual recharge deficit.

## **9.0 Storm Sewer Design**

The storm sewer network was designed to convey the runoff generated by the 25-year design storm. The appropriate size of the sewers was determined via the application of the Manning Formula and a Manning's Roughness Coefficient of 0.013. The runoff coefficients were determined via a weighted average and are dependent on the land cover. The times of concentration associated with the drainage areas that correspond to the proposed catch basins were assumed to be 10 minutes which is the minimum. The drainage areas are shown on the Proposed Inlet Drainage Area Map in Appendix I. Flow rates were computed via the application of the Rational method ( $Q = CIA$ ). Calculations are provided in Appendix F.

## **10.0 Conclusion**

The proposed development will sufficiently reduce the peak flow rates corresponding to the 2-, 10- and 100-year design storms. Furthermore, 80% of the TSS within the runoff generated by the proposed motor vehicle surfaces will be removed. The drainage patterns under post-developed conditions are very similar to the corresponding patterns under pre-developed conditions. Therefore, the proposed development will not negatively impact any off-site or downstream properties. This project has been designed in accordance with the standards set forth by various regulatory agencies including Franklin Township, the New Jersey Department of Environmental Protection, and the Somerset-Union Soil Conservation District. All engineering calculations and the

associated drainage area maps are incorporated in the Appendix for further review.

## MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

**Warning:** Soil Map may not be valid at this scale. Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service

Web Soil Survey URL:

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Somerset County, New Jersey  
Survey Area Date: Version 20, Aug 30, 2022

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Sep 14, 2020—Oct 8, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

## Pre-Developed Hydrographs

Subsection: Unit Hydrograph Summary  
Label: Area 1A (Pre-Developed)  
Scenario: 2-Year

Return Event: 2 years  
Storm Event: 2-Year

Storm Event	2-Year
Return Event	2 years
Duration	4,320.00 min
Depth	3.34 in
Time of Concentration (Composite)	25.28 min
Area (User Defined)	125,452.80 ft <sup>2</sup>
<hr/>	
Computational Time Increment	3.37 min
Time to Peak (Computed)	738.18 min
Flow (Peak, Computed)	2.78 ft <sup>3</sup> /s
Output Increment	3.00 min
Time to Flow (Peak Interpolated Output)	738.00 min
Flow (Peak Interpolated Output)	2.77 ft <sup>3</sup> /s
<hr/>	
Drainage Area	
SCS CN (Composite)	77.0
Area (User Defined)	125,452.80 ft <sup>2</sup>
Maximum Retention (Pervious)	2.99 in
Maximum Retention (Pervious, 20 percent)	0.60 in
<hr/>	
Cumulative Runoff	
Cumulative Runoff Depth (Pervious)	1.31 in
Runoff Volume (Pervious)	13,724.551 ft <sup>3</sup>
<hr/>	
Hydrograph Volume (Area under Hydrograph curve)	
Volume	13,730.000 ft <sup>3</sup>
<hr/>	
SCS Unit Hydrograph Parameters	
Time of Concentration (Composite)	25.28 min
Computational Time Increment	3.37 min
Unit Hydrograph Shape Factor	483.4
K Factor	0.7
Receding/Rising, Tr/Tp	1.670
Unit peak, qp	7.74 ft <sup>3</sup> /s

## Soil Data

## **Soil Logs and Testing Bl 286, L 14.02 Franklin Twp, 11/06/17 to 11/08/17**

### **Soil Log #1 (Basin Basin Flood Log 1)**

0-9" 5YR 4/3 Loam Topsoil; Granular, Friable  
9-26" 5YR 4/3 Highly Fractured Platy Shale w 15% Loam;  
26-105" 5YR 4/4 Fractured Shale; 5% Loam,  
Machine Refusal  
No Water  
5YR 6/2 Mottles @ 26-40"

<b>Basin Flood</b>			
Depth: 72"	Date	Time	Depth to Water
	11/07/17	12:00pm	60" (12" water added)
	11/07/17	2:00pm	66" (6" water left in hole)
	11/08/17	7:45am	72" (dry)
	11/08/17	8:00am	60" (12" water added)
	11/08/17	1:05pm	72" (dry) <b>PASS</b>

### **Soil Log #2 (Foundation Log Lot 14.04)**

0-10" 5YR 4/3 Loam Topsoil; Granular, Friable  
10-36" 5YR 4/3 Highly Fractured Platy Shale w 15% Loam;  
36-108" 5YR 4/4 Fractured Shale; 5% Loam,  
Machine Refusal  
No Water  
No Mottles

### **Soil Log #3 (Foundation Log Lot 14.05)**

0-8" 5YR 4/3 Loam Topsoil; Granular, Friable  
8-36" 2.5YR 4/3 Highly Fractured Platy Shale w 15% Loam;  
36-80" 2.5YR 4/4 Fractured Shale; 10% Loam,  
80-105" 2.5YR 4/4 Fractured Shale; 5% Loam,  
Machine Refusal  
No Water  
No Mottles

### **Soil Log #4 (Foundation Log Lot 14.06)**

0-9" 5YR 4/3 Loam Topsoil; Granular, Friable  
9-18" 2.5YR 4/3 Gravelly Clay Loam; Subangular Blocky, Friable  
18-24" 2.5YR 4/4 Highly Fractured Shale; 15% Loam,  
24-81" 2.5YR 4/4 Fractured Shale; 5% Loam,  
Machine Refusal  
No Water  
5YR 6/2 Mottles @ 18-36"

**Soil Log #5 (Foundation Log Lot 14.07)**

0-8" 7.5YR 4/4 Silty Clay Loam Topsoil; Granular, Friable  
8-18" 5YR 4/4 Highly Fractured Platy Shale w 15% Loam;  
18-90" 2.5YR 4/4 Shale; 5% Loam,  
Machine Refusal  
Water @ 53"  
7.5YR 6/1 Mottles @ 18-42"

**Soil Log #6 (Foundation Log Lot 14.08)**

0-10" 7.5YR 4/3 Silty Clay Loam Topsoil; Granular, Friable  
10-24" 7.5YR 5/3 Highly Fractured Platy Shale w 15% Loam;  
24-93" 2.5YR 4/4 Fractured Shale; 5% Loam,  
Machine Refusal  
Water @ 60"  
7.5YR 6/1 Mottles @ 24-72"

**Soil Log #7 (Dry Well Log Lot 14.04)**

0-10" 5YR 4/3 Loam Topsoil; Granular, Friable  
10-26" 5YR 4/4 Highly Fractured Shale w 15% Loam;  
26-72" 5YR 4/4 Fractured Shale; 5% Loam,  
Machine Refusal  
No Water  
No Mottles

**Basin Flood**

## Emergency Spillway Design

## Subsection: Master Network Summary

### Catchments Summary

Label	Scenario	Return Event (years)	Hydrograph Volume (ft³)	Time to Peak (min)	Peak Flow (ft³/s)
Area 1A (Pre-Developed)	Future 100-Year + 50%	150	157,694.000	738.00	31.09
Area 1A Impervious (Post-Developed)	Future 100-Year + 50%	150	76,431.000	735.00	14.74
Area 1A Pervious (Post-Developed)	Future 100-Year + 50%	150	103,642.000	735.00	21.93
Area 1B (Post-Developed)	Future 100-Year + 50%	150	14,105.000	735.00	3.11
Area 1B (Pre-Developed)	Future 100-Year + 50%	150	21,592.000	738.00	4.28

### Node Summary

Label	Scenario	Return Event (years)	Hydrograph Volume (ft³)	Time to Peak (min)	Peak Flow (ft³/s)
POA (Post-Developed)	Future 100-Year + 50%	150	154,082.000	735.00	39.36
POA (Pre-Developed - Area 1A)	Future 100-Year + 50%	150	157,694.000	738.00	31.09
POA (Pre-Developed - Area 1B)	Future 100-Year + 50%	150	21,592.000	738.00	4.28

### Pond Summary

Label	Scenario	Return Event (years)	Hydrograph Volume (ft³)	Time to Peak (min)	Peak Flow (ft³/s)	Maximum Water Surface Elevation (ft)	Maximum Pond Storage (ft³)
Pond Constructed Wetland (IN)	Future 100-Year + 50%	150	180,073.000	735.00	36.67	(N/A)	(N/A)
Pond Constructed Wetland (OUT)	Future 100-Year + 50%	150	139,977.000	735.00	36.25	101.56	57,337.000

Subsection: Outlet Input Data

Label: Emergency Spillway

Scenario: Future 100-Year + 50%

Return Event: 150 years

Storm Event: 100-Year + 50%

---

Requested Pond Water Surface Elevations

---

Minimum (Headwater)	90.50 ft
Increment (Headwater)	0.50 ft
Maximum (Headwater)	101.00 ft

---

**Outlet Connectivity**

Structure Type	Outlet ID	Direction	Outfall	E1 (ft)	E2 (ft)
Rectangular Weir	25' Weir	Forward	TW	100.95 (N/A)	101.95 (N/A)
Tailwater Settings	Tailwater				

Subsection: Outlet Input Data  
Label: Emergency Spillway  
Scenario: Future 100-Year + 50%

Return Event: 150 years  
Storm Event: 100-Year + 50%

Structure ID:	25' Weir
Structure Type:	Rectangular Weir
Number of Openings	1
Elevation	100.95 ft
Weir Length	25.00 ft
Weir Coefficient	3.00 (ft <sup>0.5</sup> )/s
Structure ID:	TW
Structure Type:	TW Setup, DS Channel
Tailwater Type	Free Outfall
Convergence Tolerances	
Maximum Iterations	30
Tailwater Tolerance (Minimum)	0.01 ft
Tailwater Tolerance (Maximum)	0.50 ft
Headwater Tolerance (Minimum)	0.01 ft
Headwater Tolerance (Maximum)	0.50 ft
Flow Tolerance (Minimum)	0.001 ft <sup>3</sup> /s
Flow Tolerance (Maximum)	10.000 ft <sup>3</sup> /s

# Appendix H

## BMP Calculations

## Pond Constructed Wetland Calculations

### i. Parameters

Standing Water Depth – Pool Zone: 4.5'

Standing Water Depth – High Marsh Zone: 0-6"

Standing Water Depth – Low Marsh Zone: 6-18"

Total Drainage Area: 3.01 Acres

### ii. WQDS Volume Allocation

WQDS Volume: 5,514 ft<sup>3</sup>

#### Pool Zone

Required Volume Allocation: 60% of WQDS Volume =  $0.6 \times 5,514 \text{ ft}^3 = 3,308 \text{ ft}^3$

Proposed Volume Allocation: 10,088 ft<sup>3</sup>

WQDS Volume Percentage:  $10,088 \text{ ft}^3 / 5,514 \text{ ft}^3 = 183\%$

#### Low Marsh Zone

Required Volume Allocation: 20% of WQDS Volume =  $0.2 \times 5,514 \text{ ft}^3 = 1,103 \text{ ft}^3$

Proposed Volume Allocation: 2,303 ft<sup>3</sup>

WQDS Volume Percentage:  $2,303 \text{ ft}^3 / 5,514 \text{ ft}^3 = 42\%$

#### High Marsh Zone

Required Volume Allocation: 10% of WQDS Volume =  $0.1 \times 5,514 \text{ ft}^3 = 551 \text{ ft}^3$

Proposed Volume Allocation: 595 ft<sup>3</sup>

WQDS Volume Percentage:  $595 \text{ ft}^3 / 5,514 \text{ ft}^3 = 11\%$

#### Pretreatment Zone\*

Required WQDS Volume Allocation: 10%

Proposed WQDS Volume Allocation: 0%

\*The 10% Water Quality Design Storm volume allocation for this component is only applicable to those systems that utilize a forebay per Chapter 10.4 of the BMP Manual.

### iii. Buoyancy Calculations

Density of Water: 62.4 lb/ft<sup>3</sup>

Acceleration of Gravity: 32 ft/s<sup>2</sup>

Density of 6" Sand Layer Above Impermeable Liner: 100 lb/ft<sup>3</sup>

Density of 18" Soil Bed Above Impermeable Liner: 100 lb/ft<sup>3</sup>

Permanent Pool Surface Area: 6,474 ft<sup>2</sup>

Volume of Sand =  $6,474 \text{ ft}^2 \times 0.5 \text{ ft} = 3,237 \text{ ft}^3$

Volume of Soil Bed =  $6,474 \text{ ft}^2 \times 1.5 \text{ ft} = 9,711 \text{ ft}^3$

Thickness of Impermeable Liner = 40 mm = 0.13 ft

Volume of Impermeable Liner =  $6,474 \text{ ft}^2 \times 0.13 \text{ ft} = 842 \text{ ft}^3$

Volume of Displaced Water =  $3,237 \text{ ft}^3 + 9,711 \text{ ft}^3 + 842 \text{ ft}^3 = 13,790 \text{ ft}^3$

$$\begin{aligned}\text{Buoyant Force} &= \text{Density of Water} \times \text{Volume of Displaced Water} \\ &= 62.4 \text{ lb/ft}^3 \times 13,790 \text{ ft}^3 = 860 \text{ kips}\end{aligned}$$

$$\begin{aligned}\text{Weight of Sand/Soil Bed} &= \text{Density of Sand/Soil Bed} \times \text{Volume of Sand/Soil bed} \\ &= 100 \text{ lb/ft}^3 \times 12,948 \text{ ft}^3 = 1,295 \text{ kips} > 860 \text{ kips}\end{aligned}$$

Note: There are no losses due to infiltration because the pond constructed wetland will be underlaid with an impervious liner.

Conclusion: The greatest cumulative decrease in depth is 1.0 inche and occurs from June 26, 2012 to July 13, 2012. Thus, the required depths of water in the pond constructed wetland are maintained throughout the year.

### MTD Drainage Area Breakdown

Drainage Area	Area (Acres)	Open Space Curve Number	Woods Curve Number	Weighted Pervious Curve Number	Impervious Curve Number	Time of Concentration (min)
		80	77		98	
MTD-101A	0.19	0.05	0.00	80.00	0.14	2.57

## Lot 14.02 in Block 286

Somerset, NJ

2/14/24

### Sizing Basis:

Filterra High Capacity biofiltration system has received final certification from the NJDEP for 80% TSS removal. Per the NJDEP, Filterra HC is considered a Green Infrastructure (GI) MTD. The sizing for the Filterra HC system under NJDEP regulations is based on the methodology outlined in Chapter 5 of the NJDEP BMP Manual. The NRCS method is utilized to determine a water quality flow rate for the drainage area in question. To validate the sizing, the parameters below were assumed.

### Design Parameters:

Design Storm = NJDEP Water Quality Design Storm (1.25-inch/2-hour storm event)  
 Filterra HC Media Flow Rate = 300 inches/hour  
 Allowable Ponding in Filterra = 9"

### Design Summary:

Utilizing NRCS Method and HydroCAD software, a hydrograph can be derived to represent the design storm. The WQ flow is routed to an appropriately sized Filterra unit. Since the Filterra system can provide up to 9" of ponding, some flow attenuation is possible. The Filterra system is able to accommodate a portion of the water quality volume in the head space above the media and release it at the system's NJDEP certified maximum treatment flow rate.

Re: MTD Lab Certification  
Filterra® HC Bioretention System  
Off-line Installation Approved

### TSS Removal Rate 80%

Dear Mr. Berg:

The Stormwater Management rules under N.J.A.C. 7:8-5.5(b) and 5.7(c) allow the use of manufactured treatment devices (MTDs) for compliance with the design and performance standards at N.J.A.C. 7:8-5 if the pollutant removal rates have been verified by the New Jersey Corporation for Advanced Technology (NJCAT) and have been certified by the New Jersey Department of Environmental Protection (NJDEP). Contech Engineered Solutions LLC has requested a Laboratory Certification for the Filterra® HC Bioretention System (Filterra® HC.)

The project falls under the “Procedure for Obtaining Verification of a Stormwater Manufactured Treatment Device from New Jersey Corporation for Advance Technology” dated January 25, 2013. The applicable protocol is the “New Jersey Department of Environmental Protection Laboratory Protocol to Assess Total Suspended Solids Removal by a Filtration Manufactured Treatment Device” dated January 25, 2013.

NJCAT verification documents submitted to the NJDEP indicate that the requirements of the aforementioned protocol have been met or exceeded. The NJCAT letter also included a recommended certification TSS removal rate and the required maintenance plan. The NJCAT Verification Report with the Verification Appendix (dated January 2021) for this device is published online at [http://www.njcat.org/uploads/newDocs/NJCATFilterraTechnologyVerificationReportFinal\\_.pdf](http://www.njcat.org/uploads/newDocs/NJCATFilterraTechnologyVerificationReportFinal_.pdf).

**The NJDEP certifies the use of the Filterra® HC stormwater treatment unit by Contech Engineered Solutions LLC at a TSS removal rate of 80% when designed, operated, and maintained in accordance with the information provided in the Verification Appendix and the following conditions:**

1. The maximum treatment flow rate (MTFR) for the manufactured treatment device (MTD) is calculated using the New Jersey Water Quality Design Storm (1.25 inches in 2 hrs) in N.J.A.C. 7:8-5.5. The MTFR is calculated based on a verified loading rate of 3.12 gpm/ft<sup>2</sup> of effective filtration treatment area.
2. The Filterra® HC stormwater treatment unit shall be installed using the same configuration reviewed by NJCAT, and sized in accordance with the criteria specified in item 7 below.
3. This device cannot be used in series with another MTD or a media filter (such as a sand filter) to achieve an enhanced removal rate for total suspended solids (TSS) removal under N.J.A.C. 7:8-5.5.
4. Additional design criteria for MTDs can be found in the New Jersey Stormwater Best Management Practices (NJ Stormwater BMP) Manual, which can be found online at [www.njstormwater.org](http://www.njstormwater.org).
5. The maintenance plan for a site using this device shall incorporate, at a minimum, the maintenance requirements for the Filterra® HC. A copy of the maintenance plan is attached to this certification. However, it is recommended to review the maintenance website at <https://www.conteches.com/Portals/0/Documents/Maintenance%20Guides/Filterra%20HC%20OM%20Packet.pdf> for any changes to the maintenance requirements.
6. For an MTD to be considered “green infrastructure” (GI) in accordance with the March 2, 2020 amendments to the Stormwater Management rules at N.J.A.C. 7:8, the MTD must meet the GI definition noted at amended N.J.A.C. 7:8-1.2. Specifically, the MTD shall (1) treat stormwater runoff through infiltration into subsoil; and/or (2) treat stormwater runoff through filtration by vegetation or soil; or (3) store stormwater runoff for reuse.

The Filterra® HC filters stormwater runoff through an engineered biofiltration soil media and, thus, meets the definition of GI. Filterra® HC can be configured with or without a precast vault. Installations that will not include a precast vault will additionally need to comply the NJDEP Stormwater BMP Manual conditions regarding separation from the seasonal high water table and, if infiltration is proposed as an outlet, minimum vertical saturated hydraulic conductivity of the subsoil. Installations without a precast vault that do not rely on infiltration are required to maintain at least a one-foot separation from the seasonal high water table measured from the lowest point of the system. Installations without a precast vault that utilize infiltration are required to have the most hydraulically restrictive soil layer below the MTD meet the minimum tested vertical saturated hydraulic conductivity of one inch per hour and have at least two feet of separation from the seasonal high water table measured from the lowest point of the system.

## 7. Sizing Requirement:

The example below demonstrates the sizing procedure for the Filterra® HC:

Example: A 0.25-acre impervious site is to be treated to 80% TSS removal using the Filterra® HC. The impervious site runoff (Q) based on the New Jersey Water Quality Design Storm was determined to be 0.79 cfs.

The selection of the appropriate model of Filterra® HC is based upon both the maximum inflow drainage area and the MTFR. It is necessary to calculate the required model using both methods and to use the largest model determined by the two methods.

### Inflow Drainage Area Evaluation:

The drainage area to the Filterra® HC in this example is 0.25 acres. Included in Table 1 below, all of the Filterra® HC models are designed with a maximum allowable drainage area greater than 0.25 acres. Specifically, the Filterra® HC with a 4'x4' media bay and a maximum allowable drainage area of 0.40 acres would be the smallest model able to treat runoff without exceeding the maximum allowable drainage area.

### Maximum Treatment Flow Rate (MTFR) Evaluation:

The site runoff (Q) was based on the following:

time of concentration = 10 minutes

i = 3.2 in/hr (page 5-8, Fig. 5-3 of the NJ Stormwater BMP Manual)

c = 0.99 (runoff coefficient for impervious)

$$Q = ciA = 0.99 \times 3.2 \times 0.25 = 0.79 \text{ cfs}$$

Given the site runoff is 0.79 cfs and based on the MTFR's listed in Table 1 below, the Filterra® HC with a 16'x8' media bay and an MTFR of 0.889 cfs would be the smallest model that could be used to treat the impervious area without exceeding the MTFR. If using more than one unit for treating runoff, the units should be configured such that the flowrate to each unit does not exceed the design MTFR for each unit and ensuring the entire 0.25 acre area is treated.

The MTFR evaluation results will be used since that method results in the highest minimum configuration determined by the two methods.

The sizing table corresponding to the available system models is noted below:

**Table 1. Filterra® HC MTFRs and Maximum Allowable Drainage Areas**

	Available Filterra® Media Bay Sizes (feet)	Effective Filtration Treatment Area (ft <sup>2</sup> )	Treatment Flow Rate (cfs)	Maximum Allowable Drainage Area (ac)
Standard Configuration Filterra and Filterra Biosape Vaults	4x4	16	0.111	0.40
	4x6 or 6x4	24	0.167	0.60
	4.5x7.83 or 7.83x4.5 (Nominal 4x8/8x4)	35.24	0.245	0.89
	6x6	36	0.250	0.91

	6x10 or 10x6	60	0.417	1.51
	7x10	70	0.486	1.76
	8x10.5	84	0.583	2.11
	8x12.5	100	0.694	2.52
Custom and/or Filterra Bioscape		Media Area in ft <sup>2</sup>	0.00694 * (Media Area in ft <sup>2</sup> )	0.0252 * (Media Area in ft <sup>2</sup> )

Be advised a detailed maintenance plan is mandatory for any project with a Stormwater BMP subject to the Stormwater Management rules, N.J.A.C. 7:8. The plan must include all of the items identified in the Stormwater Management rules, N.J.A.C. 7:8-5.8. Such items include, but are not limited to, the list of inspection and maintenance equipment and tools, specific corrective and preventative maintenance tasks, indication of problems in the system, and training of maintenance personnel. Additional information can be found in Chapter 8: Maintenance and Retrofit of Stormwater Management Measures.

If you have any questions regarding the above information, please contact me at (609) 633-7021.

Sincerely,

A handwritten signature in blue ink that reads "Gabriel Mahon".

Gabriel Mahon, Chief  
Bureau of Stormwater Permitting

Hillsborough, NJ 08844

## **INTRODUCTION**

The purpose of this manual is to provide guidelines for the operation and maintenance of the stormwater management measures that are utilized on this tract. This manual has been prepared for the use of the manager of the site to ensure that the stormwater management measures will be properly maintained in order to function as intended. The primary function of these stormwater management measures is to control the quantity and quality of runoff while providing groundwater recharge. The stormwater management measures on this property are listed below:

- Pond Constructed Wetland
- Filterra MTDs

## **RESPONSIBLE PARTY**

The maintenance of the stormwater management facilities on this property along with all the associated logs and records, in accordance with this manual, is the responsibility of:

**Mohamed Gouda**  
**Forefront Contracting**  
**252 Melvin Avenue**  
**Staten Island, NY 10314**  
**646-420-9481**  
**forefront15@yahoo.com**

This responsibility may be transferred to another party if the appropriate agencies are notified. Franklin Township and Somerset County shall be granted emergency access and maintenance rights – but are not obligated to handle all required responsibilities – in the circumstance where emergency maintenance must be performed to ensure public safety. The responsible party listed above shall cover the costs of any emergency maintenance and/or operation performed by Franklin Township or Somerset County.

## Preventative Maintenance Actions

<b>Preventative Maintenance</b>		
<b>Frequency</b>	<b>Action</b>	<b>Stormwater Management Measure</b>
Quarterly	<ul style="list-style-type: none"> <li>• Perform Quarterly Inspection</li> <li>• Remove Trash or Debris from Basin Embankment</li> <li>• Remove Trash or Debris from Emergency Spillway</li> <li>• Remove Trash or Debris from Outlet Structure</li> <li>• Remove Trash or Debris from Sand Bed</li> <li>• Mow/Trim Vegetation</li> </ul>	Pond Constructed Wetland
Semiannual	<ul style="list-style-type: none"> <li>• Remove Sediment Buildup</li> <li>• Pump Out Standing Water in Outlet Structure</li> </ul>	Pond Constructed Wetland
Annual	<ul style="list-style-type: none"> <li>• Perform Structural Inspection</li> <li>• Replace Sand Layer</li> <li>• Revegetate</li> </ul>	Pond Constructed Wetland
Biennial	<ul style="list-style-type: none"> <li>• Replace Sand Layer</li> </ul>	Pond Constructed Wetland
	<ul style="list-style-type: none"> <li>• Refer to Cascade Separator Inspection and Maintenance Guide</li> </ul>	Manufactured Treatment Devices
Unscheduled	<ul style="list-style-type: none"> <li>• Perform Quick Inspection Following Any Storm Event That Produces 1" of Rainfall or More</li> <li>• Monitor for Sinkhole Development</li> </ul>	Pond Constructed Wetland

## Corrective Maintenance Actions

<b>Potential Corrective Maintenance Actions</b>	<b>Stormwater Management Measure</b>
<ul style="list-style-type: none"><li>• Repair/Replace Outlet Structure Components</li><li>• Install New Bolts to Fix the Orifice Plate</li><li>• Stabilize Side Slope</li><li>• Repair/Replace Trash Rack</li><li>• Pest Control</li><li>• Remove Invasive Plants</li><li>• Revegetate Basin Bed if Large Barren Spots in Soil Begin to Form</li><li>• Resurface Bed</li></ul>	Pond Constructed Wetland
<ul style="list-style-type: none"><li>• Refer to Filterra Inspection and Maintenance Guide</li></ul>	Manufactured Treatment Devices

### Notes:

- The maintenance of stormwater management facilities and any future revisions to the manual shall be recorded upon the deed of record for the property.
- The person responsible for maintenance shall retain and make available, upon request by any public entity with administrative, health, environmental, or safety authority over the site, this maintenance plan.
- The operations and maintenance manual shall be evaluated by the person responsible for maintenance for updates and effectiveness at least once per year. The operations and maintenance manual shall be updated and recorded in the deed as needed at that time.

# Disposal Plan

## Disposal/Recycling Procedures

- Dewatering procedures and requirements  
A portable pump shall be utilized for dewatering.
- Unloading procedures and requirements  
Maintenance crew shall abide by all state, local, and federal laws during the unloading operations.
- Covering procedures and requirements  
Maintenance crew shall abide by all state, local, and federal laws during the covering operations.

## Disposal Field – Onsite (if applicable)

### Location of the Onsite Disposal Field:

Onsite disposal is not permitted.

---

---

### Permits for the Proposed Onsite Disposal Field

Local/State permits  not required  
 required

Permit Number	Government Entity	Issuance Date	Expiration Date
(If available)	(If available)	(If available)	(If available)

A copy of all permits should be included in the Documents section of the Maintenance Plan.

## Disposal Field – Offsite (if applicable)

### Description of the Offsite Disposal:

Disposal of debris, trash, sediment and other waste material must be done at suitable disposal/recycling sites and in compliance with all applicable local, state and federal waste regulations.

---

A copy of the contract should be included in the Documents section of the Maintenance Plan if available.

## Maintenance Personnel, Equipment, Tools, and Supplies

### Maintenance Personnel/Equipment/Tools/Supplies

Personnel/Equipment/Tools Name	Quantity
General Maintenance Crew	1
Debris Removal Tools (Leaf Blower, Shovel, Rake, Trimmers, Gloves, Boots, etc)	1
Heavy Machinery (Light Backhoe, Skid steer, etc)	1

### Specialized, proprietary or nonstandard equipment, tools, and supplies, if applicable

Name of the specialized, proprietary or nonstandard equipment, tools and supplies	Source

Warranty and parts information should be attached to the Documents section.

## Maintenance Cost Estimate

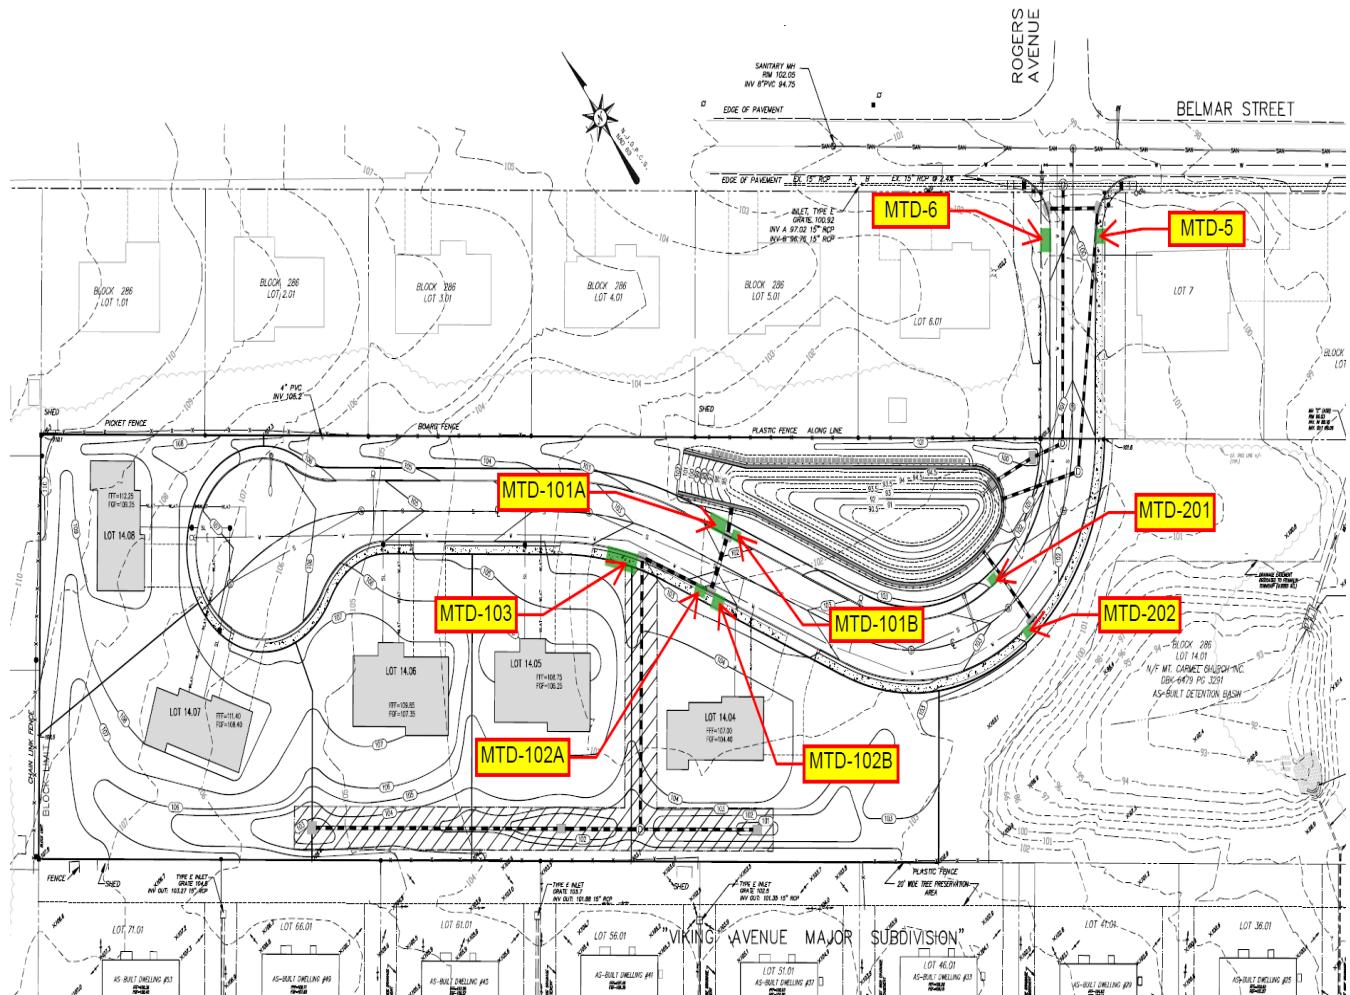

<b>Manufactured Treatment Device (Filterra HC)</b>	Replace Mulch/Remove Trash: \$2,000/yr
<b>Pond Constructed Wetland</b>	Remove Sediment/Invasive Plants: $\$300 \times 2 = \$600/\text{yr}$ Remove Trash & Debris: $\$150/\text{yr} \times 2 = \$300/\text{yr}$ Mow Berm: $\$250 \times 2 = \$500/\text{yr}$ Total Cost: $\$1,050/\text{yr}$
<b>Total</b>	= \$3,050/yr

Inspection Checklist and Maintenance Actions .....	5
Preventative Maintenance Record .....	7
Corrective Maintenance Record.....	8

## **MTD Overview**

A Manufactured Treatment Device (MTD) is a prefabricated stormwater treatment structure utilizing settling, filtration, absorptive/adsorptive materials, vortex separation, vegetative components, and/or other appropriate technology to remove pollutants from stormwater runoff.

Manufactured treatment devices are intended to capture sediments, metals, hydrocarbons, floatables, and/or other pollutants in stormwater runoff before being conveyed to a storm sewer system, additional stormwater quality treatment measure, or body of water.

Proper care and attention with regard to the long-term maintenance of this stormwater management measure is critically important to the safety and health of the public.

The MTDs that are utilized on this property are designed to remain dry between storm events. These MTDs are designed to remove 80% of the TSS that are found in the inflow generated by the Water Quality Design Storm. These MTDs are not designed to attenuate peak flows or recharge groundwater.

The MTDs that are utilized on this property qualify as green infrastructure since they runoff to infiltrate into the subsoil and treat stormwater runoff through filtration by vegetation/soil.

## **Basic Design Information**

### **Hydrology Design Targets**

1. The maximum design storm is the Water Quality Design Storm which corresponds to 1.25 inches of rainfall in 2 hours.
2. The TSS removal rate is 80%.

### **Configuration Targets**

1. The name of the MTD is Filterra.
2. The manufacturer of the MTD is Contech Engineered Solutions.

### **Critical Maintenance Features**

The maintenance procedures associated with the MTDs are described in the Filterra HC Owner's Manual which is attached to this Field Manual.

Re: MTD Lab Certification  
Filterra® HC Bioretention System  
Off-line Installation Approved

### **TSS Removal Rate 80%**

Dear Mr. Berg:

The Stormwater Management rules under N.J.A.C. 7:8-5.5(b) and 5.7(c) allow the use of manufactured treatment devices (MTDs) for compliance with the design and performance standards at N.J.A.C. 7:8-5 if the pollutant removal rates have been verified by the New Jersey Corporation for Advanced Technology (NJCAT) and have been certified by the New Jersey Department of Environmental Protection (NJDEP). Contech Engineered Solutions LLC has requested a Laboratory Certification for the Filterra® HC Bioretention System (Filterra® HC.)

The project falls under the “Procedure for Obtaining Verification of a Stormwater Manufactured Treatment Device from New Jersey Corporation for Advance Technology” dated January 25, 2013. The applicable protocol is the “New Jersey Department of Environmental Protection Laboratory Protocol to Assess Total Suspended Solids Removal by a Filtration Manufactured Treatment Device” dated January 25, 2013.

NJCAT verification documents submitted to the NJDEP indicate that the requirements of the aforementioned protocol have been met or exceeded. The NJCAT letter also included a recommended certification TSS removal rate and the required maintenance plan. The NJCAT Verification Report with the Verification Appendix (dated January 2021) for this device is published online at [http://www.njcat.org/uploads/newDocs/NJCATFilterraTechnologyVerificationReportFinal\\_.pdf](http://www.njcat.org/uploads/newDocs/NJCATFilterraTechnologyVerificationReportFinal_.pdf).

**The NJDEP certifies the use of the Filterra® HC stormwater treatment unit by Contech Engineered Solutions LLC at a TSS removal rate of 80% when designed, operated, and maintained in accordance with the information provided in the Verification Appendix and the following conditions:**

1. The maximum treatment flow rate (MTFR) for the manufactured treatment device (MTD) is calculated using the New Jersey Water Quality Design Storm (1.25 inches in 2 hrs) in N.J.A.C. 7:8-5.5. The MTFR is calculated based on a verified loading rate of 3.12 gpm/ft<sup>2</sup> of effective filtration treatment area.
2. The Filterra® HC stormwater treatment unit shall be installed using the same configuration reviewed by NJCAT, and sized in accordance with the criteria specified in item 7 below.
3. This device cannot be used in series with another MTD or a media filter (such as a sand filter) to achieve an enhanced removal rate for total suspended solids (TSS) removal under N.J.A.C. 7:8-5.5.
4. Additional design criteria for MTDs can be found in the New Jersey Stormwater Best Management Practices (NJ Stormwater BMP) Manual, which can be found online at [www.njstormwater.org](http://www.njstormwater.org).
5. The maintenance plan for a site using this device shall incorporate, at a minimum, the maintenance requirements for the Filterra® HC. A copy of the maintenance plan is attached to this certification. However, it is recommended to review the maintenance website at <https://www.conteches.com/Portals/0/Documents/Maintenance%20Guides/Filterra%20HC%20OM%20Packet.pdf> for any changes to the maintenance requirements.
6. For an MTD to be considered “green infrastructure” (GI) in accordance with the March 2, 2020 amendments to the Stormwater Management rules at N.J.A.C. 7:8, the MTD must meet the GI definition noted at amended N.J.A.C. 7:8-1.2. Specifically, the MTD shall (1) treat stormwater runoff through infiltration into subsoil; and/or (2) treat stormwater runoff through filtration by vegetation or soil; or (3) store stormwater runoff for reuse.

The Filterra® HC filters stormwater runoff through an engineered biofiltration soil media and, thus, meets the definition of GI. Filterra® HC can be configured with or without a precast vault. Installations that will not include a precast vault will additionally need to comply the NJDEP Stormwater BMP Manual conditions regarding separation from the seasonal high water table and, if infiltration is proposed as an outlet, minimum vertical saturated hydraulic conductivity of the subsoil. Installations without a precast vault that do not rely on infiltration are required to maintain at least a one-foot separation from the seasonal high water table measured from the lowest point of the system. Installations without a precast vault that utilize infiltration are required to have the most hydraulically restrictive soil layer below the MTD meet the minimum tested vertical saturated hydraulic conductivity of one inch per hour and have at least two feet of separation from the seasonal high water table measured from the lowest point of the system.

## 7. Sizing Requirement:

The example below demonstrates the sizing procedure for the Filterra® HC:

Example: A 0.25-acre impervious site is to be treated to 80% TSS removal using the Filterra® HC. The impervious site runoff (Q) based on the New Jersey Water Quality Design Storm was determined to be 0.79 cfs.

The selection of the appropriate model of Filterra® HC is based upon both the maximum inflow drainage area and the MTFR. It is necessary to calculate the required model using both methods and to use the largest model determined by the two methods.

### Inflow Drainage Area Evaluation:

The drainage area to the Filterra® HC in this example is 0.25 acres. Included in Table 1 below, all of the Filterra® HC models are designed with a maximum allowable drainage area greater than 0.25 acres. Specifically, the Filterra® HC with a 4'x4' media bay and a maximum allowable drainage area of 0.40 acres would be the smallest model able to treat runoff without exceeding the maximum allowable drainage area.

### Maximum Treatment Flow Rate (MTFR) Evaluation:

The site runoff (Q) was based on the following:

time of concentration = 10 minutes

i = 3.2 in/hr (page 5-8, Fig. 5-3 of the NJ Stormwater BMP Manual)

c = 0.99 (runoff coefficient for impervious)

$$Q = ciA = 0.99 \times 3.2 \times 0.25 = 0.79 \text{ cfs}$$

Given the site runoff is 0.79 cfs and based on the MTFR's listed in Table 1 below, the Filterra® HC with a 16'x8' media bay and an MTFR of 0.889 cfs would be the smallest model that could be used to treat the impervious area without exceeding the MTFR. If using more than one unit for treating runoff, the units should be configured such that the flowrate to each unit does not exceed the design MTFR for each unit and ensuring the entire 0.25 acre area is treated.

The MTFR evaluation results will be used since that method results in the highest minimum configuration determined by the two methods.

The sizing table corresponding to the available system models is noted below:

**Table 1. Filterra® HC MTFRs and Maximum Allowable Drainage Areas**

	Available Filterra® Media Bay Sizes (feet)	Effective Filtration Treatment Area (ft <sup>2</sup> )	Treatment Flow Rate (cfs)	Maximum Allowable Drainage Area (ac)
Standard Configuration Filterra and Filterra Biosape Vaults	4x4	16	0.111	0.40
	4x6 or 6x4	24	0.167	0.60
	4.5x7.83 or 7.83x4.5 (Nominal 4x8/8x4)	35.24	0.245	0.89
	6x6	36	0.250	0.91

Be advised a detailed maintenance plan is mandatory for any project with a Stormwater BMP subject to the Stormwater Management rules, N.J.A.C. 7:8. The plan must include all of the items identified in the Stormwater Management rules, N.J.A.C. 7:8-5.8. Such items include, but are not limited to, the list of inspection and maintenance equipment and tools, specific corrective and preventative maintenance tasks, indication of problems in the system, and training of maintenance personnel. Additional information can be found in Chapter 8: Maintenance and Retrofit of Stormwater Management Measures.

If you have any questions regarding the above information, please contact me at (609) 633-7021.

Sincerely,

A handwritten signature in blue ink that reads "Gabriel Mahon".

Gabriel Mahon, Chief  
Bureau of Stormwater Permitting

Attachment: Maintenance Plan

Dennis Contois, NJDEP – DLRP

## **Filterra HC Plant Selection Overview**

Plant Lists are available on the Contech website highlighting recommended plants for Filterra systems in your area. Keep in mind that plants are subject to availability due to seasonality and required minimum size for the Filterra HC system. Plants installed in the Filterra HC system are container plants (max 15 gallon) from nursery stock and will be immature in height and spread at Activation.

It is the responsibility of the owner to provide adequate irrigation when necessary to the plant of the Filterra HC system.

The "Planting Requirements for Filterra HC Systems" document is included as an appendix and discusses proper selection and care of the plants within Filterra HC systems.

## **Warranty Overview**

Refer to the Contech Engineered Solutions LLC Stormwater Treatment System LIMITED WARRANTY for further information. The following conditions may void the Filterra HC system's warranty and waive the manufacturer provided Activation and Maintenance services:

- Unauthorized activation or performance of any of the items listed in the activation overview
- Any tampering, modifications or damage to the Filterra HC system or runoff protection devices
- Removal of any Filterra HC system components
- Failure to prevent construction related runoff from entering the Filterra HC system
- Failure to properly store and protect any Filterra HC components (including media and underdrain stone) that may be shipped separately from the vault

## **Routine Maintenance Guidelines**

Routine maintenance is included by the manufacturer on all Filterra HC systems for the first year after activation. This includes a maximum of 2 visits to remove debris, replace pretreatment mulch, and prune the vegetation. More information is provided in the Operations and Maintenance Guidelines. Some Filterra HC systems also contain diversion bypass or outlet bays. Depending on site pollutant loading, these bays may require periodic removal of debris, however this is not included in the first year of maintenance and would likely not be required within the first year of operation.

These services, as well as routine maintenance outside of the included first year, can be provided by certified maintenance providers listed on the Contech website. Training can also be provided to other stormwater maintenance or landscape providers.

## Why Maintain?

All stormwater treatment systems require maintenance for effective operation. This necessity is often incorporated in your property's permitting process as a legally binding BMP maintenance agreement. Other reasons to maintain are:

- Avoiding legal challenges from your jurisdiction's maintenance enforcement program.
- Prolonging the expected lifespan the media in the Filterra HC system.
- Avoiding more costly media replacement.
- Helping reduce pollutant loads leaving your property.

Simple maintenance of the Filterra HC is required to continue effective pollutant removal from stormwater runoff before discharge into downstream waters. This procedure will also extend the longevity of the living biofilter system. The Filterra HC system is also subjected to various materials entering the inlet, including trash, silt, leaves, etc. which will be contained above the mulch layer. Too much silt may inhibit the Filterra HC system flow rate, which is the reason for site stabilization before activation. Regular replacement of the mulch stops accumulation of such sediment.

If the system is not maintained on regular intervals, is subject to a catastrophic spill or other event, or subject to unusual pollutant loading, full media bed replacement could be required. Please contact Contech for further evaluation if you feel this may be necessary.

## When to Maintain?

Contech includes a 1-year maintenance plan with each system purchase. Annual included maintenance consists of a maximum of two (2) scheduled visits. Additional maintenance may be necessary depending on sediment and trash loading (by Owner or at additional cost). The start of the maintenance plan begins when the system is activated.

Maintenance visits are scheduled seasonally; the spring visit aims to clean up after winter loads including salts and sands while the fall visit helps the system by removing excessive leaf litter.

It has been found that in regions which receive between 30-50 inches of annual rainfall, (2) two visits are generally required; regions with less rainfall often only require (1) one visit per annum. Varying land uses can affect maintenance frequency;

e.g. some fast food restaurants require more frequent trash removal. Contributing drainage areas which are subject to new development wherein the recommended erosion and sediment control measures have not been implemented may require additional maintenance visits.

Some sites may be subjected to extreme sediment or trash loads, requiring more frequent maintenance visits. This is the reason for detailed notes of maintenance actions per unit, helping the Supplier and Owner predict future maintenance frequencies, reflecting individual site conditions.

Owners must promptly notify the (maintenance) Supplier of any damage to the plant(s), which constitute(s) an integral part of the bioretention technology. Owners should also advise other landscape or maintenance contractors to leave all maintenance to the Supplier (i.e. no pruning or fertilizing) during the first year.

## Exclusion of Services

Clean up due to major contamination such as oils, chemicals, toxic spills, etc. will result in additional costs and are not covered under the Supplier maintenance contract. Should a major contamination event occur the Owner must block off the outlet pipe of the Filterra HC (where the cleaned runoff drains to, such as drop inlet) and block off the inlet of the Filterra HC. The Supplier should be informed immediately.

## Maintenance Visit Summary

Each maintenance visit consists of the following simple tasks (detailed instructions below).

1. Inspection of Filterra HC and surrounding area
2. Removal of tree grate and erosion control stones
3. Removal of debris, trash and mulch
4. Mulch replacement
5. Plant health evaluation & pruning or replacement as necessary
6. Clean area around Filterra HC
7. Complete paperwork

## Maintenance Tools, Safety Equipment and Supplies

Ideal tools include camera, bucket, shovel, broom, pruners, hoe/rake, and tape measure. Appropriate Personal Protective Equipment (PPE) should be used in accordance with local or company procedures. This may include impervious gloves where the type of trash is unknown, high visibility clothing and barricades when working near traffic and also safety hats and shoes. A T-Bar or crowbar should be used for moving the tree grates (up to 170 lbs ea.). Most visits require minor trash removal and a full replacement of mulch. See below for actual number of bagged mulch that is required in each media bay size. Mulch should be a double shredded, hardwood variety. Some visits may require additional Filterra engineered soil media for the Filterra HC system, available from the Supplier.

	Available Filterra® HC Media Bay Sizes (feet)	Filter Surface Area (ft <sup>2</sup> )	Mulch Volume at 3" Depth (ft <sup>2</sup> )	# of 2 ft <sup>2</sup> Mulch Bags
Standard Configuration Filterra and Filterra Bioscape Vaults	4x4	16	4	2
	4x6 or 6x4	24	6	3
	4.5x7.83 or 7.83x4.5 (Nominal 4x8/8x4)	35.24	9	5
	6x6	36	9	5
	6x8 or 8x6	48	12	6
	6x10 or 10x6	60	15	8
	6x12 or 12x6	72	18	9
	7x13 or 13x7	91	23	12
	14x8	112	28	14

	18x8	144	36	18
	20x8	160	40	20
	22x8	176	44	22
Peak Diversion Filterra Vaults	4x4	16	4	2
	4.5x5.83 or 5.83x4.5 (Nominal 4x6/6x4)	26.24	7	4
	6x6	36	9	5
	6x8	48	12	6
	6x10 or 10x6	60	15	8
	7x10	70	18	9
	8x10.5	84	21	11
	8x12.5	100	25	13
	Custom and/or Filterra Bioscape	Media Area in ft <sup>2</sup>	0.25 x (Media Area in ft <sup>2</sup> )	0.125 x (Media Area in ft <sup>2</sup> )

# Maintenance Visit Procedure

Keep sufficient documentation of maintenance actions to predict location specific maintenance frequencies and needs. An example Maintenance Report is included in this manual.

## 1. Inspection of Filterra HC and surrounding area

- Record individual unit before maintenance with photograph (numbered). Record on Maintenance Report (see example in this document) the following:

Record on Maintenance Report the following:

Standing Water	yes   no
Damage to Box Structure	yes   no
Damage to Grate	yes   no
Is Bypass Clear	yes   no

If yes answered to any of these observations, record with close-up photograph (numbered).

## 2. Removal of tree grate and erosion control stones

- Remove cast iron grates for access into Filterra HC box.
- Dig out silt (if any) and mulch and remove trash & foreign items.

## 3. Removal of debris, trash and mulch

Record on Maintenance Report the following:

Silt/Clay	yes   no
Cups/ Bags	yes   no
Leaves	yes   no
Buckets Removed	_____

- After removal of mulch and debris, measure distance from the top of the Filterra engineered media soil to the top of the top slab. Compare the measured distance to the distance shown on the approved Contract Drawings for the system. Add Filterra media (not top soil or other) to bring media up as needed to distance indicated on drawings.

Record on Maintenance Report the following:

Distance to Top of Top Slab (inches)	_____
Inches of Media Added	_____

#### 4. Mulch replacement

- Add double shredded mulch evenly across the entire unit to a depth of 3".
- Refer to Filterra Mulch Specifications for information on acceptable sources.
- Ensure correct repositioning of erosion control stones by the Filterra HC inlet to allow for entry of trash during a storm event.
- Replace Filterra HC grates correctly using appropriate lifting or moving tools, taking care not to damage the plant.

#### 5. Plant health evaluation and pruning or replacement as necessary

- Examine the plant's health and replace if necessary.
- Prune as necessary to encourage growth in the correct directions

Record on Maintenance Report the following:

Height above Grate	_____ (ft)
Width at Widest Point	_____ (ft)
Health	healthy   unhealthy
Damage to Plant	yes   no
Plant Replaced	yes   no

#### 6. Clean area around Filterra HC

- Clean area around unit and remove all refuse to be disposed of appropriately.

#### 7. Complete paperwork

- Deliver Maintenance Report and photographs to appropriate location (normally Contech during maintenance contract period).
- Some jurisdictions may require submission of maintenance reports in accordance with approvals. It is the responsibility of the Owner to comply with local regulations.

## Maintenance Checklist

Drainage System Failure	Problem	Conditions to Check	Condition that Should Exist	Actions
Inlet	Excessive sediment or trash accumulation.	Accumulated sediments or trash impair free flow of water into Filterra HC.	Inlet should be free of obstructions allowing free distributed flow of water into Filterra HC HC.	Sediments and/or trash should be removed.
Mulch Cover	Trash and floatable debris accumulation.	Excessive trash and/or debris accumulation.	Minimal trash or other debris on mulch cover.	Trash and debris should be removed and mulch cover raked level. Ensure bark nugget mulch is not used.
Mulch Cover	"Ponding" of water on mulch cover.	"Ponding" in unit could be indicative of clogging due to excessive fine sediment accumulation or spill of petroleum oils.	Stormwater should drain freely and evenly through mulch cover.	Recommend contact manufacturer and replace mulch as a minimum.
Vegetation	Plants not growing or in poor condition.	Soil/mulch too wet, evidence of spill. Incorrect plant selection. Pest infestation. Vandalism to plants.	Plants should be healthy and pest free.	Contact manufacturer for advice.
Vegetation	Plant growth excessive.	Plants should be appropriate to the species and location of Filterra HC.		Trim/prune plants in accordance with typical landscaping and safety needs.
Structure	Structure has visible cracks.	Cracks wider than 1/2 inch or evidence of soil particles entering the structure through the cracks.		Vault should be repaired.

Maintenance is ideally to be performed twice annually.

# POND CONSTRUCTED WETLAND FIELD MANUAL

Block 286, Lot 14.02  
Franklin Township  
Somerset County, New Jersey

## Location Map

## **Table of Contents**

Standard Constructed Wetland Overview.....	3
Basic Design Information.....	4
Inspection Checklist and Maintenance Actions .....	6
Preventative Maintenance Record .....	14
Corrective Maintenance Record.....	15

## **Standard Constructed Wetland Overview**

### Functionality

Standard constructed wetlands are stormwater management systems designed to maximize the removal of pollutants from stormwater runoff. Flow is directed through an engineered, open marsh system where pollutants are removed through settling and vegetative uptake/filtration. The total suspended solids (TSS) removal rate is 90%.

Proper care and attention in the long-term maintenance of the stormwater management measure is critically important to the safety and health of the public.

### Type of BMP – Wet Basin / Extended Detention of Runoff and Settlement of TSS

A constructed wetland is a type of wet basin, in which water is retained in a permanent pool. This standard constructed wetland is designed for extended detention of runoff and settlement of TSS. It is not designed to infiltrate the runoff.

Standard constructed wetlands shall have a water surface elevation approximately at the design water surface elevation year-round. Standard constructed wetlands consist of a combination of two or more of the following components: pool zone, marsh zone and semi-wet zone. The different zones of the constructed wetland require different water depths, shapes, and vegetation; therefore, it is normal to see varying water depths throughout the system.

## **Basic Design Information**

### **PCW-1**

#### **Hydrology Design Targets**

1. This standard constructed wetland is designed as a pond constructed wetland consisting of the following zones:

<b>Pond Constructed Wetlands Design Specifications</b>	
Drainage Area	3.01 Acres
Standing Water Depth: High Marsh Zone	0-6 Inches
Standing Water Depth: Low Marsh Zone	6-18 Inches
Standing Water Depth: Pool Zone	4.5 Feet

2. This pond will discharge runoff to the existing storm manhole.

#### **Hydraulic Design Targets**

1. Design Parameters

	<b>Water Quality Design Storm</b>	<b>Future 2-Year Storm</b>	<b>Future 10-Year Storm</b>	<b>Future 100-Year Storm</b>
<b>Rainfall Depth (inches)</b>	1.25 inches in 2 hours	3.34 inches in 24 hours	5.01 inches in 24 hours	8.21 inches in 24 hours
<b>Runoff Volume (cubic feet)</b>	5,514	29,292	51,802	114,529
<b>Peak Flow Rate (cfs)</b>	0.45	2.35	6.43	12.85
<b>Water Surface Elevation (feet)</b>	95.62	96.71	97.47	99.56

2. The 25' wide emergency spillway is at EL. 100.95 feet.

## **Basin Configuration Targets**

1. Pretreatment is provided by manufactured treatment devices.
2. Outlet Information:

Outlet Type	Orifice Size / Weir Length	Invert Elevation
Orifice	6"	95.00
Weir	6"	96.00
Weir	15"	96.50

3. The basin is lined.
4. The pond does not intercept groundwater.
5. The pond is designed without a drawdown conduit.

## **Critical Maintenance Features**

1. Floatables need to be cleaned and removed from the wetland.
2. Remove dead vegetation to prevent mosquito problems.
3. Water depth in each zone must be maintained at design level.
4. Sediment level in the pool zone needs to be checked and sediment needs to be frequently removed to ensure sufficient storage volume and detention time.
5. Native species are preferred during revegetation.

## **Inspection Checklist / Maintenance Actions Pond Constructed Wetland PCW-1**
